The SL1100
Smart Communications for Small Business
Why choose the SL1100?

In today’s highly competitive business environment, effective and reliable communications are critical to a company’s success. Therefore, it is important that you invest in a unified communications solution that allows you to take advantage of the latest productivity-enhancing IP applications that can deliver increased performance throughout your organization – that solution is NEC’s SL1100 Communications System.

This unique platform is the ideal solution for any small business. The SL1100 makes your team more reachable, responsive and productive.

Value for Money

- Powerful communications with a small business price tag
- Only pay for what you need, with an entirely scalable solution
- Lower operational costs considerably by making smarter use of your communications
- A range of remote/home office options to help lower brick and mortar costs

Easy to use

- Intuitive features that the whole team can use, without the need for training
- Desktop phones, wireless handsets and applications include shortcuts that speed up working processes
- Time-saving applications empower your team to become more productive

Keep them connected

- Use your mobile phone to stay connected through your office number, from anywhere
- DECT wireless communications maximizes reachability from anywhere on the premises
- Built-in conferencing for business meetings reduces travel costs
- Never miss important messages with enhanced voicemail to keep you up to date

  - Company Directory Access
  - Personal Contact Lists
  - Softphone
  - CRM Integration

- Network Remote Office Locations
  - Share Voicemail, Transfer Calls and make Intercom Calls

- Selection of IP and Digital Telephones

Work Smarter – SL Desktop Suite

Intuitive applications to increase efficiency and productivity

NEC’s SL Desktop Suite delivers to you an integrated unified communications (UC) solution that enhances your organization’s productivity and collaboration. This productivity-boosting solution offers you key functions that deliver excellent business benefits.

Manage Communications from Your Desktop PC

The SL Desktop Suite’s Desktop Client is an intuitive application providing full call control from your PC screen. With just a few clicks of your mouse, you can click-to-dial, manage calls and look up contacts. It also easily integrates with your Microsoft® Office Outlook® contacts to provide click-to-dial functionality within emails for further time-saving benefits.

Support for Remote and Mobile Workers

The SL Desktop Suite’s Softphone is a portable telephony application, offering you system phone functionality from your laptop, from wherever you are; ideal for remote and mobile workers. With the Softphone, your workers will have the communications tools they need to work efficiently and productively, whether they’re in the office or on the road.

Integration with Third Party CRM Systems

The SL Desktop Suite’s CRM integration offers businesses seamless application access to leverage and manage their information more efficiently. When a call is received from a customer in your CRM database, this integration provides a pop-up with their information which enables you to offer them better service. The SL Desktop Suite integrates with Salesforce®, Time Matters®, Tiger Paw®, Gold Mine®, ACT® and browser-based CRM systems.

Stay connected while on the move

Remain reachable via a single number from anywhere

With Mobile Extension, you can take your office number with you when you’re on the road. It provides you access to system features such as caller ID, call transfer and voicemail and it really is like being in the office, whether you’re traveling or sitting in traffic.

- Company specialists can now be empowered to maintain high service standards when out of the office since they remain reachable from any location.
- Salespeople can use Mobile Extension to ensure that even when they’re on the road, they never miss a call which could lead to a lucrative business opportunity.
- With DECT handsets for wireless voice communications, you can keep in-touch with customers and colleagues from any in-building location.
More than voicemail
Advanced features for enhanced communications

InMail is more than just a regular voicemail box. Packed with powerful business features, this is a solution to make keeping up to date easier than ever. It offers Message Notification to your desktop phone, home office or mobile phone to allow you to monitor your mailbox effortlessly from wherever you are. You can even choose to receive email notifications with the message included as an audio attachment.

No matter what you're up to, you can have the right recorded message to match. With three personalized greetings, you can select the one most appropriate depending on your availability or the time of day.

Additionally, the Call Record feature enables you to keep track of important discussions. Recordings can be emailed to colleagues and stored for quick reference at a later time.

Networking
Extend the reach of your communications

With the SL1100’s networking capabilities, you can extend the reach of your communications to remote offices and mobile workers and ensure that your business can collaborate effectively. You can eliminate duplication and improve efficiencies by transparently sharing a single voicemail and intercom system. It also enables you to share trunks and transfer calls easily.

Automatic Call Distribution (ACD)
Handle incoming calls with ease

The SL1100’s Automatic Call Distribution (ACD) efficiently routes callers based on pre-established criteria. ACD is often found in offices that handle large volumes of incoming phone calls from callers who have no need to talk to a specific person, but who require assistance from any of multiple persons at the earliest opportunity.

When all agents are busy assisting callers, the outside party can listen to periodic Announcement messages while waiting for an agent to become free. Callers can also overflow to another destination so that outside callers are not left waiting on hold for an extended period of time, making each interaction between your business and your customers quick and easy.

Contact Center Software
Monitor activity in real-time

The SL1100’s Contact Center software allows up to two Supervisors to monitor the real-time activity of the system’s ACD, such as Agent State and ACD Queue Status, using their PC’s. They can also run ACD/Contact Center activity reports, such as Agent Call Summary, Abandoned Calls, etc.
SL1100 Feature List
